Include Vehicles
 Include Engines
 Include Fitment Info

Export

Mecka allows for exporting data based on each individual brand.

Export Parameters

Text CSV Export Options

Exporting text will export data for the selected brand and price that has been selected with the following details:

The selected price acts as a second price to export which will appear in the column preceding MSRP.

Should MSRP be selected, it will only appear once

The file will download to your computer as a .csv file (comma separated value), which can be directly opened in Excel with the data in the correct columns

The standard csv will wrap the column in double quotes if the column contains a comma already.

Ex: Fits Ford, Mazda, Volvo will become "Fits Ford, Mazda, Volvo"

Note that Excel strips the leading zero for numbers. To prevent this, Part Numbers that start with a zero will be prepended with a single quote. This was decided because having a quote in front is better than losing the first digit.

Ex: 01234 will become '01234.
